# Arrow ISV Appliance Program

## Making the Switch to a Software-Centric Business Model

Many organizations that have traditionally built hardware are shifting their focus to a software-centric business model, requiring capable partners to deliver the critical hardware for their solutions. To help in this transition, Arrow's ISV Appliance Program is a low-cost alternative for companies that have traditionally built or managed the hardware. Arrow can help you offer a seamless customer experience, scale your business, support your channel strategies, and maximize margin goals.

### Arrow's ISV Appliance Program:

- Helps combat intense competition from software-led companies by freeing up resources for software development
- Offers standardized hardware solutions that bring seamless integration capability
- Delivers out-of-the-box scaled solutions with global reach
- Eliminates the complexity of bringing to market hardware and software solutions
- Reduces the total cost of solutions development
- Enables customers to be in line with broader technology trends without the need for massive investments in hardware departments

Arrow is a proven partner for companies that provide an integrated hardware-software experience but do not want the overhead of managing the hardware.

- Arrow handles all elements of the hardware offering, including inventory, management, roadmap, and support.
- Arrow sells the hardware through the partner's existing channels or through our own Arrow channels.

# Benefits of the Arrow ISV Appliance Program
