DESCRIPTION

Add tons of storage to your next project with this micro SD card socket. We use this part in all our designs and it works great with any microSD ('transflash') of any storage size. It's a surface-mount part and the pins are underneath so it needs a fine tip and paste or thin solder to get in there and solder, not for beginners! It is a push-push type: push the card in to insert, push again to spring it out.

You can get the [EAGLE component for this in our EagleCAD library](#), its called (surprise!) **MICROSD**
