## **DESCRIPTION**

Add a miniature wireless controller to your computer project with this combination keyboard and touchpad. We found the smallest wireless USB keyboard available, a mere  $6" \times 2.4" \times 0.5"$  (152mm x 59mm x 12.5mm)! It's small but usable to make a great accompaniment to a computer such as the Beagle Bone or Raspberry Pi. The keyboard itself is battery powered (there's a rechargeable battery inside that you charge up via the included USB cable). The keyboard communicates back to the computer via 2.4 GHz wireless link (not Bluetooth)

The keyboard can only be used with a USB-host such as a computer. Its not intended to be used with an Arduino or Basic Stamp, etc. We tested it with the Raspberry Pi and it works great: uses only one USB port for both mouse and keyboard.

#### TECHNICAL DETAILS

- Works up to 30 feet (10 meters)
- Standby time: 500 700 hours
- Backlit keyboard
- Keyboard dimensions: 6" x 2.4" x 0.5" (152mm x 59mm x 12.5mm)
- Weight (keyboard + USB adapter): 100 grams
- USB adapter, wireless 2.4GHz (not bluetooth)
- USB charging cable included

**ABOUT US** 

"In considering any new subject, there is frequently a tendency, first, to overrate what we find to be already interesting or remarkable; and, secondly, by a sort of natural reaction, to undervalue the true state of the case, when we do discover that our notions have surpassed those that were really tenable" - Ada Lovelace
